

Problem

The merged array should also be sorted in non-decreasing order. Complete the function `mergeSortedArrays` that takes the following parameters:

`int arr1[n]`: the first sorted array `int arr2[m]`: the second sorted array
Returns `int[]`: the merged sorted array

Input Format

The first line contains an integer `n`, the size of the first array.

The second line contains `n` space-separated integers representing the first sorted array. The third line contains an integer `m`, the size of the second array. The fourth line contains `m` space-separated integers representing the second sorted array.

Constraints

$1 \leq n, m \leq 10^5$ $-10^9 \leq arr1[i], arr2[i] \leq 10^9$ Both arrays are sorted in non-decreasing order.

Output Format

Print the merged sorted array as space-separated integers.
